

Jettrak

REMOTE
IGNITION
CONTROL

Jet-trak is a Remote Ignition Control System. This allows an operator to Call, Disable or Enable a Jet-ski remotely, from either a handheld unit or from an ECDIS position onboard a Yacht.

The system is used in the Marine Industry by Jet-ski Rental Companies (where mandatory) or professional crew seeking to improve safety & security onboard a Yacht.

Irresponsible use of a Jet-ski is dangerous, particularly in crowded or confined water areas. Jet-trak improves safety and allows for better management of water-craft, with ease.

If you are obligated to install an Ignition Control System, then contact us to discover the benefits of a Jet-trak system. These can include a reduced insurance premium, and legal compliance

If leaving Jet-skis unattended, they can be disabled with the handset, rendering them difficult to move and less prone to theft.
